# The SBManager™ suite of solutions makes Big Data computing possible at the edge.

**Power on and get on with the mission!**

## Features of SBManager™ include:

- Operates on all available AWS Snowball devices
- Automate startup, unlock, stop & configuration management
- Automatically discovers & adds new Snowball Devices
- Includes role-based access control (RBAC) for root access management
- Microservice platform enables application integration
- Network capable but not network dependent for use in austere environments

Quantum Edge Services, LLC developed SBManager and provides a wide range of support services to optimize use such as for Artificial Intelligence/Machine Learning, Cyber, and other compute activities in the field, at the edge. In addition to product support, we are able to provide professional services to customize, develop, or manage Snowball deployments. Contact us for custom services.
