

## OUANTUM

SBManager<sup>™</sup> is tailored for the enterprise, technology benefits a few or thousands of deployed Snow devices es and supports single or bulk actions across multiple Snow devices simultaneously (both Snowball or Snowcone devices). Our software enables the ability to remote manage and bulk configure Snow devices that are geographically diverse, or it will work on a localized network disconnected from the Internet. Enterprise ready, our user-friendly interface makes it possible for any user to easily access and manage Snow devices without the need to deploy advanced IT professionals in the field.

Inside SBManager<sup>™</sup> we can apply all commands in the AWS Boto library at the click of a button to a fleet of local or remote Snow device(s). Our software includes Role Based Access Control and user access management, this adds control over who can access our software for added security among segregated business teams. Our dashboard displays of all Snow device(s) or Individual Snow device data allowing easy management of your fleet of Snow devices by operations groups.

**SBManager** 

SBManager<sup>™</sup> provides an impressive enterprise set of features and tools that enables simplified data migration, edge computing and deployable hardware integrated solutions (enhancing AWS's Hardware-As-A-Service). Nothing compares to SBManager and new features are continuously being added.
